INDEX TO
THE WELDING JOURNAL
VOLUME 34—1955

Published by the American Welding Society, 33 West 39th Street, New York 18, N. Y.

The Welding Journal

This part includes general technical articles, papers presented before Section and National meetings, articles for the practical welder and designer, news, biographical items, current welding literature and advertising.

Page allocation by issues

January	1– 96	July	627–722
February	97–196	August	723–830
March	197–292	September	831–926
April	293–390	October	927–1056
May	391–526	November	1057–1152
June	527–626	December	1153–1260

Welding Research Supplement

This section includes the reports of the Welding Research Council, critical digests of the literature, reports of the Project Committees and research reports of industry.

Page allocation by issues

January	1-s– 64-s	July	313-s–360-s
February	65-s–112-s	August	361-s–408-s
March	113-s–160-s	September	409-s–464-s
April	161-s–208-s	October	465-s–528-s
May	209-s–264-s	November	529-s–576-s
June	265-s–312-s	December	577-s–624-s

THE WELDING JOURNAL

SUBJECT INDEX

Adams Lecture, 1954—The Toughness of Weldability—William L. Warner, 9–22.
Aircraft Industry—Inert-Gas Welding in the—J. M. Thompson, Jr., 635–640.
Aircraft Welding Design—Fatigue Aspects In—J. Koziarski, 446–458.
Airframe Manufacturing—Spot Welding of Structural Application In—W. R. Gain, 851–860.
Al-Mg-Mn Alloys 5083 and 5086—Properties of Welds in—L. A. Cook, S. L. Channon and A. R. Hard, 112–127.
An Application of Pressure Welding to Fabricate Continuous Welded Rail—David C. Hastings, 1065–1069.
An Improved Method of Oxy-Fuel Combustion—E. H. Roper, 337–344.
Arc Welders—Metallic Rectifiers for—G. K. Willecke, 231–236.
Automatic Hard Facing with Mild Steel Electrodes and Agglomerated Alloy Fluxes—J. S. McKeighan, 301–308.
Automatic Percussion Welding of Telephone Relay Contacts—A. L. Quinlan, 237–240.

Backing Ring Elimination Permits Ultrasonic Testing and Avoids Cracking at Piping Welds—W. A. Pollock 954–960.
Brazing Alloys—Metallurgical Properties of Silver-Cadmium-Copper-Zinc—Karl M. Weigert, 420–424.
Brazing Larger Brass Electronic Components—Semiautomatic Multiple Flame—J. W. Weyers, 405–412.
Bridge Plate Girders by Submerged Arc Welding—Fabrication of—Joseph H. Hoffman, 741–746.

Comparative Study of European Welding Operations—R. W. Clark, S. A. Greenberg, C. E. Jackson, 935–953.
Composite Tube Rod—Surfacing With—R. P. Culbertson, 861–869.
Consumable-Electrode Inert-Arc Spot Welding—R. L. Hackman, 839–845.
Contact Electrodes—Recent Developments on—D. L. Mathias, 316–328.
Crane Rails—Manual Arc Welding of Butt Joints In—Ivan Kutuchief, 1179–1184.
Cutting—Inert-Gas Metal-Arc—R. S. Babcock, 309–315.

Design and Application of Edge-Ring Projection Welding—Chester A. Czohara, 551–558.

Editorial Previews
Air Reduction's New Liquid Oxygen Plant, 142–143.
GE Welding Department Completes Major Expansion Program, 49–50.
Sciaky Opens Western Research Division, 761–762.
Electrode Activation for Inert-Gas-Shielded Metal-Arc Welding—A. Lesnewich, 1167–1178.
Electrodes—Iron-Powder—A Progress Report—Jerry Hinkel, 440–445.
Engineering Aspects of Inert-Gas Tungsten-Arc Welding of Piping—Helmut Thielsch and C. S. Pulliam, 1185–1195.
European Welding Operations—A Comparative Study of—R. W. Clark, S. A. Greenberg and C. E. Jackson, 935–953.

Evaluating the Iron-Powder Coated Electrodes for Production Use—Donald B. Howard, 752–758.
Evaluation of Fuels and Oxidants for Welding and Associated Processes—W. B. Moen and J. Campbell, 870–876.

Fabrication of Bridge Plate Girders by Submerged Arc Welding—Joseph H. Hoffman, 741–746.
Fatigue Aspects in Aircraft Welding Design—J. Koziarski, 446–458.
Ferrous Metals—High-Nickel Overlays On—G. R. Pease, H. B. Bott and H. C. Waugh, 40–48.
Fuels and Oxidants for Welding and Associated Processes—Evaluation of—W. B. Moen and J. Campbell, 870–876.
Fused-In-Place Spray Metallized Coatings—Sam Tour, 329–336.
Fusion Welding Unalloyed Titanium Sheet Without Filler Rod—Alan V. Levy and Robert Wickham, 413–419.

Gage Material—High-Speed Welding of—R. A. Kubli and T. J. McElrath, 978–987.
Gamma Radiographic Control of Welded Transmission Lines—C. C. Bates, 1081–1096.

Hand Welding 5-Chrome and 9-Chrome Pipe—W. J. Lester, 641–647.
Hard Facing with Fused Self-Fluxing Metallized Coatings—Practical—Harvey S. Miller, 214–219.
Hard Facing with Mild Steel Electrodes and Agglomerated Alloy Fluxes—Automatic—J. S. McKeighan, 301–308.
Hardenability Evaluation of Welding Electrodes—Leo M. West, 399–404.
High-Nickel Overlays on Ferrous Metals—G. R. Pease, H. B. Bott and H. C. Waugh, 40–48; Discussion by Sidney Low, 571–572.
High-Speed Welding of Gage Material—R. A. Kubli and T. J. McElrath, 978–987.
High-Temperature Alloy Brazing of Thin Materials for Jet Engines—Arnold S. Rose and William N. Lewis, 30–39.
How to Use Semiautomatic Submerged Arc Welding—R. A. Wilson, 535–541.
How to Weld High-Pressure Vessels with Automatics—Wilmer W. Weber, 1161–1166.

Ignition Tubes for A-C Control—Ratings of—P. Van der Ploeg, 966–977.
Inert-Arc Welding of Pressure Piping—Joint Detail for—R. T. Pursell, 747–751.
Inert-Gas Metal-Arc Cutting—R. S. Babcock, 309–315.
Inert-Gas Metal-Arc Overlay Process—C. R. Felmley, 542–550.
Inert-Gas-Shielded Metal-Arc Welding—Electrode Activation for—A. Lesnewich, 1167–1178.
Inert-Gas-Shielded Metal-Arc Welding of Mild Steel—Production Application of—John L. Lang, 23–29.
Inert-Gas-Shielded Metal-Arc Welding—New Techniques in—R. W. Tuthill, 137–141.
Inert-Gas-Shielded Tungsten-Arc Spot Welding—C. A. McClean, 648–656.
Inert-Gas Welding in the Aircraft Industry—J. M. Thompson, Jr., 635–640.
Inert-Gas Welding of Stator Packs—F. J. Pilia, 559–567.
Iron-Powder Coated Electrodes for Production Use—Evaluating the—Donald B. Howard, 752–758.
Iron-Powder Electrodes—A Progress Report—Jerry Hinkel, 440–445.

Jet Engines—High-Temperature Alloy Brazing of Thin Materials for—Arnold S. Rose and William N. Lewis, 30–39.
Joint Detail for Inert Arc Welding of Pressure Piping—R. T. Pursell, 747–751.

Lower Part Cost by Projection Welding—C. H. Burgston, 1070–1080.

Macro Etch System of Evaluating Quality of Resistance Welding—D. O. Samuelson and F. G. Harkins, 105–111.
Maintenance Welding and Cutting Operations On Radioactive Process Equipment—E. B. LaVelle and J. M. Fox, Jr., 731–740.
Manual Arc Welding of Butt Joints in Crane Rails—Ivan Kutuchief, 1179–1184.
Mechanical Properties of Welded 356 Aluminum Castings—Walter S. Tenner, 128–136.
Mechanization Applied to Oxygen Cutting—R. L. Deily, 433–439.
Metallic Rectifiers for Arc Welders—G. K. Willecke, 231–236.
Metallurgical Aspects of Silver Brazing Titanium—N. A. Tiner, 846–850.
Metallurgical Properties of Silver-Cadmium-Copper-Zinc Brazing Alloys—Karl M. Weigert, 420–424.
Mild Steel—A Production Application of Inert-Gas-Shielded Metal-Arc Welding of—John L. Lang, 23–29.

New Techniques in Inert-Gas-Shielded Metal-Arc Welding—R. W. Tuthill, 137–141.

Oscillographic Instruments in Spot Welding Quality Control and Maintenance—Glenn Woodmancy, 425–432.
Overlay Process—Inert-Gas Metal-Arc—C. R. Felmley, 542–550.
Oxy-Fuel Combustion—An Improved Method of—E. H. Roper 337–344.
Oxygen Cutting—Mechanization Applied to—R. L. Deily, 433–439.

Percussion Welding of Telephone Relay Contacts—Automatic—A. L. Quinlan, 237–290.
Piping—Engineering Aspects of Inert-Gas Tungsten-Arc Welding of—H. Thielsch and C. S. Pulliam, 1185–1195.
Piping Welds—Backing Ring Elimination Permits Ultrasonic Testing and Avoids Cracking at—W. A. Pollock, 954–960.
Power Sources—Selection of D-C Arc Welding—A. U. Welch, 241–245.
Practical Hard Facing with Fused Self-Fluxing Metallized Coatings—Harvey S. Miller, 214–219.

Practical Welder and Designer
Aircraft Jigs—Fixture Expedites Production of Welded Angles for, 51.
All-Welded Aluminum Deck-Edge Elevator, 994–995.
All-Welded Scaffold Speeds Recovery of Crash Victim, 679.
Aluminum Church Windows—Inert-Arc Welding of—H. B. Van Fossen and J. Holmstock, 345–346.
Aluminum Deck-Edge Elevator—All-Welded, 994–995.
Aluminum Window Frames Fabricated by Inert-Gas Tungsten-Arc Welding—W. J. Hance, 1102.
Auto Shop—Some Hints for the—A. MacLeod, 145.

Braze Welding—Popular Wrought Iron Furniture Is Easily Made by—A. J. Beldon, 763–765.
Butter Churn Is Welded by Inert-Arc Process, 461–462.

Chrome-Moly Steels in High-Pressure High-Temperature Service—Welding of—C. D. Cooper, 882–884.
Complicated Aluminum Assemblies by Inert Arc Process—W. O. Whitehead, 52.
Conversion of Railroad Observation Car Aided by Plug Welding, 249–250.
Crack-Free Butt Welds in High-Strength Metals, 884–885.

Deseaming Blowpipes Cut Barge Repair Time, Cost 70 Per Cent, 1200.
Diesel Components—Iron-Powder Electrodes Boost Welding Rates on—Herbert Chase, 144–145.
Distortion Cut in Welding of Giant I-Beams, 1103.
Doing It Better—William Brotherton, 146–147.

Electrical Construction Simplified by Stud Welding—Richard Sawyer, 678–679.

Fixture Expedites Production of Welded Angles for Aircraft Jigs, 51.
Flame-Cutting Rushes Forged Slabs for Atomic Program, 991.

Giant Steel Rings for Lincoln Tunnel Tube Are Flame-Cut—A. H. Yoch, 1197–1198.

Hard-Facing Process Permits Reclaiming of Pipe Line Flow-Control Valves, 573.

Identifying Some Metals Prior to Welding—Shop Methods for—Arthur L. Phillips, 877–881.
Improved Design for Welded Dresser Reels Uses Automatic Submerged Arc, 990–991.
Inert-Arc Process—Butter Churn Is Welded by, 461–462.
Inert Arc Process—Complicated Aluminum Assemblies—W. O. Whitehead, 52.
Inert Arc Welding of Aluminum Church Windows—H. B. Van Fossen and J. Holmstock, 345–346.
Inert-Arc Welding Used on World's Fastest Toy Jet-Engines, 462.
Inert-Gas Metal-Arc Welded Aluminum Ups Tank-Truck Capacity, 1201.
Inert-Gas Metal-Arc Welding Clads 103-In. Propeller—C. S. Sherman, 1196–1197.
Inert-Gas Tungsten-Arc Welding—Aluminum Window Frames Fabricated By—W. J. Hance, 1102.
Iron-Powder Electrode Saves Through Bead Shape and Appearance—G. N. Bull, 682.
Iron-Powder Electrodes Boost Welding Rates on Diesel Components—Herbert Chase, 144–145.

Motorized Chair Gives Invalids a Lift—R. L. Fuller, 1101.

Oxy-Acetylene Flame Keeps Heavy Equipment in Top Shape—J. Dean Davidson, 574–576.

Pipe Fabrication—Stationary "Flexible" Welder Speeds, 578.
Pipe Line Flow—Control Valves—Hard-Facing Process Permits Reclaiming of, 573.
Pipeline—Radiographing 620 Miles of Welded, 459–460.
Plug Welding—Conversion of Railroad Observation Car Aided by, 249–250.
Popular Wrought Iron Furniture Is Easily Made by Braze Welding—A. J. Beldon, 763–765.
Production of Control Levers Simplified by Stud Welding, 995.

Radiographing 620 Miles of Welded Pipeline, 459–460.
Railroad Cars—Welding Cross Bearers for Steel, 1100.

Scrap Cutting—Short Cuts In—W. E. McLaughlin and C. F. Steinberg, 676–677.
70,000 Square Feet of Dome—John Lund, 992–993.
Shop Methods for Identifying Some Metals Prior to Welding—Arthur L. Phillips, 877–881.
Short Cuts in Scrap Cutting—W. E. McLaughlin and C. F. Steinberg, 676–677.
Silver Soldering Provides Pressure-Tight Joints—R. M. Walters, 998.
Some Hints for the Auto Shop—A. MacLeod, 145.
Stationary "Flexible" Welder Speeds Pipe Fabrication, 578.
Steel Bins for Grain Storage—William F. Fischer, 680–681.
Structural Steel Welding—A. L. Fenlason, 768–769.
Stud Welding—Electrical Construction Simplified by—Richard Sawyer, 678–679.
Stud Welding—Production of Control Levers Simplified by, 995.
Submerged Arc—Improved Design for Welded Dresser Reels Uses Automatic—990–991.
Submerged-Arc Welds Pass X-Ray Tests, 1199–1200

Ten-Second Tab Tacker—J. R. Fullerton, 766–767.
Titanium Under Plastic Tent Leads to Better Welds—Welding of, 993.
Trailer Trucks Beat Corrosion Problem—Welded Aluminum, 681.
Tunnel Linings Produced on Production-Line Basis, 1099.

Welded Aluminum Trailer Trucks Beat Corrosion Problem, 681.
Welded Cast Iron Parts Hold Hi-Speed Centrifugal Mold—H. C. Waugh and R. Frank, 886.
Welded Lightweight Steel Beams Feature Mass Home Building, 988–999.
Welded Steel Construction—Charles I. Orr, 673–675.
Welding of Chrome-Moly Steels in High Pressure High-Temperature Service—C. D. Cooper, 882–884.
Welding Cross-Bearers for Steel Railroad Cars, 1100.
Welding of Titanium Under Plastic Tent Leads to Better Welds, 993.
Wintertime Is Welding Time for the Farmer—M. Misko, 248–249.

Pressure Piping—Joint Detail for Inert Arc Welding—R. T. Pursell, 747–751.
Pressure Vessels with Automatics—How to Weld—Wilmer W. Weber, 1161–1166.
Pressure Welding to Fabricate Continuous Welded Rail—An Application of—David C. Hastings, 1065–1069.
Production Application of Inert-Gas-Shielded Metal-Arc Welding of Mild Steel—John L. Lang, 23–29.
Projection Welding—Design and Application of Edge-Ring—Chester A. Czohara, 551–558.

Projection Welding—Lower Part Cost By—C. H. Burgston, 1070–1080.
Properties of Welds in Al-Mg-Mn Alloys 5083 and 5086–L. A. Cook, S. L. Channon and A. R. Hard, 112–127.

Radioactive Process Equipment—Maintenance Welding and Cutting Operations on—E. B. LaVelle and J. M. Fox, Jr., 731–740.
Radiography in the Jungles of Sumatra—Walter W. Offner, 961–965.
Ratings of Ignitron Tubes for A-C Control—P. Van der Ploeg, 966–977.
Recent Developments on Contact Electrodes—D. L. Mathias, 316–328.
Resistance Welding—The Macro Etch System of Evaluating Quality of—D. O. Samuelson and F. G. Harkins, 105–111.

Selection of D-C Arc Welding Power Sources—A. U. Welch, 241–245.
Semiautomatic Multiple Flame Brazing Larger Brass Electronic Components—J. W. Weyers, 405–412.
Silver Brazing Titanium—Metallurgical Aspects of—N. A. Tiner, 846–850.
Some New Concepts on Welding Qualifications Requirements—S. A. Greenberg, 759–760.
Spot Welding—Consumable-Electrode Inert-Arc—R. L. Hackman, 839–845.
Spot Welding—Inert-Gas-Shielded Tungsten-Arc—C. A. McClean, 648–656.
Spot Welding Quality Control and Maintenance—Oscillographic Instruments—Glenn Woodmancy, 425–432.
Spot Welding of Structural Applications in Airframe Manufacturing—W. R. Gain, 851–860.
Spray Metallized Coatings—Fused-In-Place—Sam Tour, 329–336.
Stainless Steel for 1100° F Turbine Operation—Welding Type 347—R. M. Curran and A. W. Rankin, 205–213.
Stator Packs—Inert-Gas Welding—F. J. Pilia, 559–567.
Submerged Arc Welding—Fabrication of Bridge Plate Girders By—Joseph H. Hoffman, 741–746.
Submerged Arc Welding—How to Use Semiautomatic—R. A. Wilson, 535–541.
Surfacing with Composite Tube Rod—R. P. Culbertson, 861–869.

Telephone Relay Contacts—Automatic Percussion Welding of—A. L. Quinlan, 237–240.
Titanium Alloy Weldability and Correlated Metallurgy—H. L. Meredith and C. W. Handova, 657–672.
Titanium—Metallurgical Aspects of Silver Brazing—N. A. Tiner, 846–850.
Titanium, Unalloyed, Sheet—Fusion Welding Without Filler Rod—Alan V. Levy and Robert Wickham, 413–419.
Transmission Lines—The Gamma Radiographic Control of Welded—C. C. Bates, 1081–1096.

Weldability—The Toughness of, 1954 Adams Lecture—William L. Warner, 9–22.
Weldability of Wrought High-Alloy Materials—R. P. Culbertson, 220–230.
Welding Electrodes—Hardenability Evaluation of—Leo M. West, 399–404.
Welding Qualifications Requirements—Some New Concepts on—S. A. Greenberg, 759–760.
Welding Type 347 Stainless Steel for 1100° F Turbine Operation—R. M. Curran and A. W. Rankin, 205–213; Discussion by John N. Parks, 568–570.
Wrought High-Alloy Materials—Weldability of—R. P. Culbertson, 220–230.

WELDING RESEARCH SUPPLEMENT

SUBJECT INDEX

Aluminum Alloy Beams, Static Tests of Welded—Marshall Holt and R. B. Matthiesen, 313-s to 320-s.
Aluminum Fusion Welding of 24S-T3—J. B. Arthur, 558-s to 569-s.

Biaxial Fatigue Properties of Pressure Vessel Steels—C. E. Bowman and T. J. Dolan, 51-s to 59-s; Discussion—J. T. Tucker, Jr., 179-s to 182-s; Authors' Reply, 182-s.
Blistering and Embrittlement of Pressure Vessel Steels by Hydrogen—G. A. Nelson and R. T. Effinger, 12-s to 21-s.
Brazed Copper Joints, Filler-Metal Strengths in—W. H. Munse and D. D. Crawford, 105-s to 111-s; Discussion—Karl M. Weigert, 111-s.
Brazing Alloys, Lithium Additions to—N. Bredzs and D. Canonico, 535-s to 543-s.
Brazing, Electrolytic Welding and—P. Zuffa, 378-s.
Brazing Molybdenum for High-Temperature Service—M. I. Jacobson and D. C. Martin, 65-s to 74-s.
Brittle Failure of Tankage Steel Plates—F. J. Feely, Jr., M. S. Northup, S. R. Kleppe and M. Gensamer, 596-s to 607-s.
Brittle Fracture—Crack Arresting by Overlays of Notch-Tough Weld Metal—P. P. Puzak and W. S. Pellini, 577-s to 581-s.
Brittle Fracture, Effect of Microstructure on the Morphology of—J. C. Danko and R. D. Stout, 113-s to 116-s.
Brittle Fracture, Energy Criteria of—E. Orowan, 157-s to 160-s.
Brittle Fracture of Steel Plates, Experiments on—D. K. Felbeck and E. Orowan, 570-s to 575-s.
Brittle Fracture—Room Temperature Crack Propagation and Size Effect on Mild Steel—J. D. Lubahn, 518-s to 528-s.
Brittle Fracture Studies; Discussion—T. S. Robertson, 62-s to 63-s; Authors' Reply, 63-s to 64-s; Discussion—W. G. Beynon, 64-s.

Carbon Pick-Up in Carbon-Arc Grooves—B. M. MacLeod, 270-s.
Chromium-Nickel Steel Weld Metals, Characteristics of—J. Heuschkel, 484-s to 504-s.
Contact Resistance—96-s.
Cooperative Research by Industry—L. F. Kooistra, 49-s to 50-s.
Copper and Its Alloys, Welding of—Ira T. Hook, 321-s to 337-s.
Crack Arresting by Overlays of Notch-Tough Weld Metal—P. P. Puzak and W. S. Pellini, 577-s to 581-s.
Cr-Mo Weld Metal, Temper Brittleness of—W. J. Lester and G. R. Prescott, 553-s to 557-s.

Design of Welded Doublers for Hatch Corners—H. Kihara, Y. Akita, N. Ando and K. Yoshimoto, 465-s to 471-s.
Design of Welded Pressure Vessels Using Quenched and Tempered Steel—Leonard P. Zick, 442-s to 448-s.
Direct Explosion Tests of Welding Procedures in Ship Plate—G. S. Mikhalapov and W. A. Snelling, 97-s to 104-s.

Electrodes—"Fish Eyes" in Low-Hydrogen Weld Metal—K. L. Zeyen, 557-s.
Electrolytic Welding and Brazing—P. Zuffa, 378-s.
Embrittlement and Blistering of Pressure Vessel Steels by Hydrogen—G. A. Nelson and R. T. Effinger, 12-s to 21-s.

Fatigue and Static Behavior of Spot-Welded Joints in Titanium—W. H. Kearns, W. S. Hyler and D. C. Martin, 241-s to 250-s.
Fatigue of Spot Welds—Georges Welter, 153-s to 156-s.
Fatigue Properties of High-Strength Pressure Vessel Steels—J. H. Gross and R. D. Stout, 161-s to 166-s.
Fatigue Properties of Pressure Vessel Steels—C. E. Bowman and T. J. Dolan, 51-s to 59-s; Discussion—J. T. Tucker, Jr., 179-s to 182-s; Authors' Reply, 182-s.
Fatigue Strength of Butt Welds in Structural Steels—L. A. Harris, G. E. Nordmark and N. M. Newmark, 83-s to 96-s.
Fatigue Strength of Steel, Effect of Specimen Size, Notches and Grain Size on—C. Massonnet, 483-s, 517-s.
"Fish Eyes" in Low-Hydrogen Weld Metal—K. L. Zeyen, 557-s.
Flash Welding, A Mathematical Analysis of the Temperature Distribution During—E. F. Nippes, W. F. Savage, H. Suzuki and W. H. Chang, 271-s to 285-s.
Flash Welding of Commercial Molybdenum—Ernest F. Nippes and Wen H. Chang—Part I, 132-s to 140-s; Part II, 251-s to 264-s.
Flash Welding of Steels—E. F. Nippes, W. F. Savage, G. Grotke and S. M. Robelotto, 223-s, to 240-s.

Gouging—Carbon Pick-Up in Carbon-Arc Grooves—B. M. MacLeod, 270-s.
Graphitization, Effect of Pretreatment of Martensite on—G. V. Smith, E. J. Dulis and B. W. Royle, 374-s to 378-s.
Graphitization in Piping Systems, Evaluation of—Helmut Thielsch, E. M. Phillips and E. R. Jerome, Jr., 286-s to 294-s.

Hatch Corners, Stress Studies of Various Welded Doubler—H. Kihara, Y. Akita, N. Ando and K. Yoshimoto, 465-s to 471-s.
High-Strength Pressure Vessel Steels, Plastic Fatigue Properties of—J. H. Gross and R. D. Stout, 161-s to 166-s.
High Temperature Alloys, Investigation of the Hot Ductility of—E. F. Nippes, W. F. Savage, B. J. Bastian, H. F. Mason and R. M. Curran, 183-s to 196-s.
High-Tensile Weldable Steels, Continuous-Cooling TTT Curves of—F. Nehl and A. Rose, 112-s.
High-Yield-Strength Steels, Welding Procedure Qualification Tests for—A. P. Bunk, 197-s to 206-s.
Hydrogen Blistering and Embrittlement of Pressure Vessel Steels—G. A. Nelson and R. T. Effinger, 12-s to 21-s.

Inert-Gas-Shielded Argon Arc, Nitrogen Effects In—H. C. Ludwig, 409-s to 414-s.

Lithium Additions to Brazing Alloys—N. Bredzs and D. Canonico, 535-s to 543-s.
Low-Alloy Steel—Temper Brittleness of 1Cr – ½Mo Weld Metal—W. J. Lester and G. R. Prescott, 553-s to 557-s.
Low Alloys, Heat Treatment of Air Hardening—J. J. B. Rutherford and J. F. Ewing, 470-s to 483-s.

Magnesium Alloys, Stress Relaxation and Stress Relief of Some—Paul Klain, 415-s to 423-s.
Molybdenum Brazed for High-Temperature Service—M. I. Jacobson and D. C. Martin, 65-s to 74-s.
Molybdenum, Flash Welding of Commercial—Ernest F. Nippes and Wen H. Chang—Part I, 132-s to 140-s; Part II, 251-s to 264-s.

Navy Tear Test for Measuring the Work of Fracture Propagation in Ductile Metals—Hugh E. Romine, 396-s to 408-s.
Nickel Steel Plate, Effect of Welding on Transition Temperature of—T. N. Armstrong and W. L. Warner, 209-s to 215-s.
Nitrogen Effects in Argon Arc Welding Atmospheres—H. C. Ludwig, 409-s to 414-s.
Notch Bend Specimens; Discussion—C. E. Hartbower, 59-s to 61-s; Authors' Reply, 61-s.
Notch Slow-Bend Test, Effect of Electrode Type in; Discussion—C. E. Hartbower, 166-s to 168-s; Authors' Reply, 168-s.
Notch Toughness, Effect of Microstructure on—John H. Gross and Robert D. Stout, 117-s to 122-s.

Piping Systems, Evaluation of Graphitization in—Helmut Thielsch, E. M. Phillips and E. R. Jerome, Jr., 286-s to 294-s.
Preheating Effects on Stress-Corrosion Cracking of Steel Weldments—E. Paul DeGarmo and I. Cornet, 472-s to 475-s.
Pressure Vessel Construction, Suitability of Quenched and Tempered Steels for—Leon C. Bibber, 449-s to 464-s.
Pressure Vessel Design Using Quenched and Tempered Steel—Leonard P. Zick, 442-s to 448-s.
Pressure Vessel Shell Theory, Uniform Notation System for—Committee Report—393-s to 395-s.
Pressure Vessel Steels, Biaxial Fatigue Properties of—C. E. Bowman and T. J. Dolan, 51-s to 59-s; Discussion—J. T. Tucker, Jr., 179-s to 182-s; Authors' Reply, 182-s.
Pressure Vessel Steels, Embrittlement and Blistering of, by Hydrogen—G. A. Nelson and R. T. Effinger, 12-s to 21-s.
Pressure Vessel Steels, Plastic Fatigue Properties of High-Strength—J. H. Gross and R. D. Stout, 161-s to 166-s.
Pressure Vessel Steels—Procedure Qualification Tests for Six High-Yield-Strength Steels—A. P. Bunk, 197-s to 206-s.
Pressure Vessel Steels, Temper Brittleness of—Leonard D. Jaffe, 141-s to 150-s; Discussion—H. S. Blumberg, 151-s to 152-s; Author's Reply, 152-s; Discussion—M. A. Scheil and C. B. Rex, 360-s.
Pressure Vessel Steels, Transition Temperature Behavior of—L. J. McGeady, 1-s to 11-s.
Pressure Vessels, Properties and Characteristics of a Quenched and Tempered Steel for—W. D'Orville Doty, 425-s to 441-s.
Pressure Vessels, Stresses from Radial Loads and External Moments in Cylindrical—P. P. Bijlaard, 608-s to 617-s.
Problems, Welding Research—265-s to 270-s.
Procedure Qualification Tests for Six High-Yield-Strength Steels—A. P. Bunk, 197-s to 206-s.

Quenched and Tempered Steel, Design of Welded Pressure Vessels Using—Leonard P. Zick, 442-s to 448-s.
Quenched and Tempered Steel for Pressure Vessels, Properties and Characteristics of a—W. D'Orville Doty, 425-s to 441-s.
Quenched and Tempered Steels for Pressure Vessel Construction—Leon C. Bibber, 449-s to 464-s.

Radiographs of Welds, International Collection of—81-s to 82-s.
Research Problems—265-s to 270-s.
Residual Stresses in Welded Structures, Effects of—G. M. Boyd, 216-s to 222-s; Discussion—A. W. Huber and L. S. Beedle, 575-s to 576-s; Author's Reply, 576-s.
Residual Welding Stress of Fundamental Constrained Joint, Studies on the—Hiroshi Kihara and Kōichi Masubuchi, 595-s.
Resistance Flash Welding of Commercial Molybdenum—Ernest F. Nippes and Wen H. Chang, 132-s to 140-s.
Resistance Seam Welding Low-Carbon Steel—M. L. Begeman and Gene C. Walker, 123-s to 131-s.
Resistance Welding, Contact—96-s.
Rigid Frame Corner Tests—A. A. Toprac and Lynn S. Beedle, 348-s to 360-s.

Seam Welding Dissimilar Thicknesses of Low-Carbon Steel—M. L. Begeman and E. J. Funk, 529-s to 534-s.
Seam Welding Low-Carbon Steel—M. L. Begeman and Gene C. Walker, 123-s to 131-s.
Series Spot Welding 0.036-In. Steel, Measurement of Shunting Currents in—E. F. Nippes, W. F. Savage and S. M. Robelotto, 618-s to 624-s
Ship Fracture and Project Steels, Crack-Starter Tests of; Supplementary Note—P. P. Puzak, M. E. Schuster and W. S. Pellini, 196-s.
Ship Hatch Corners, Stress Studies of Various Shaped Welded Doubler—H. Kihara, Y. Akita, N. Ando and K. Yoshimoto, 465-s to 471-s.
Ship Plate, Direct Explosion Tests of Welding Procedures in—G. S. Mikhalapov and W. A. Snelling, 97-s to 104-s.
Ship Studies, Admiralty—346-s to 347-s.
Shrinkage and Residual Welding Stress of Fundamental Constrained Joint—Hiroshi Kihara and Kōichi Masubuchi, 595-s.
Sigma Phase in Austenitic Stainless Steel Weldments—O. H. Henry, M. A. Cordovi and G. J. Fischer, 75-s to 81-s.
Spot-Welded Joints in Titanium, Static and Fatigue Behavior of—W. H. Kearns, W. S. Hyler and D. C. Martin, 241-s to 250-s.
Spot Welding, Series, Measurement of Shunting Currents in 0.036-In. Steel—E. F. Nippes, W. F. Savage and S. M. Robelotto, 618-s to 624-s.
Spot Welds, Fatigue of—Georges Welter, 153-s to 156-s.
Spraying Welding Scarves with Aluminum—A. Leroy, H. Granjon and M. Evrard, 528-s.
Stainless Steel—Mechanical Properties of Modified Type 347 Weld Metals—R. David Thomas, Jr. and Lorin K. Poole, 583-s to 595-s.
Stainless Steel, The Heat-Affected Zone in Arc-Welded Type 347—E. F. Nippes, H. Wawrousek and W. L. Fleischmann, 169-s to 179-s
Stainless Steel Weld Metals, Characteristics of—J. Heuschkel, 484-s to 504-s.
Stainless Steel Weldments, Sigma Phase in Austenitic—O. H. Henry, M. A. Cordovi and G. J. Fischer, 75-s to 81-s.
Stainless Steels, Tension-Impact Properties of, at Ambien and Low Temperatures—A. Choquet, V. N. Krivobok and G. Welter, 361-s to 373-s.
Stainless Steels—Welding Summary—Helmut Thielsch, 22-s to 30-s.
Stress Corrosion Cracking of Steel Weldments, Effects of Preheating on—E. Paul DeGarmo and I. Cornet, 472-s to 475-s.
Stress Relaxation and Stress Relief of Some Magnesium Alloys—Paul Klain, 415-s to 423-s.
Structural—Further Studies of Welded Corner Connections—A. A. Toprac and Lynn S. Beedle, 348-s to 360-s.
Structural—Longitudinal Deformation of Long Beam Due to Fillet Welding—Tokutanō Sasayama, Kōichi Masubuchi and Sigeru Moriguchi, 581-s to 582-s.
Structural—Static Tests of Welded Aluminum Alloy Beams—Marshall Holt and R. B. Matthiesen, 313-s to 320-s.
Structural Steel Research, Importance of—Norman W. Rimmer, 206-s to 207-s.

Temper Brittleness of Pressure Vessel Steels—Leonard D. Jaffe, 141-s to 150-s; Discussion—H. S. Blumberg, 151-s to 152-s; Author's Reply, 152-s; Discussion—M. A. Scheil and C. B. Rex, 360-s.
Titanium Alloy Plates, Weld Heat-Affected Zones in 1/2-In.—Ernest F. Nippes, John M. Gerken and Bernard W. Schaaf, 31-s to 49-s.
Titanium Alloy Sheet, Effects of Interstitial Elements on Weldability of—Part I—H. M. Meyer, 379-s to 393-s; Part II—H. M. Meyer, 505-s to 517-s.
Titanium, Effects of Alloying Elements on Welds in—Part II—G. E. Faulkner, 295-s to 312-s.
Titanium, The Static and Fatigue Behavior of Spot-Welded Joints in—W. H. Kearns, W. S. Hyler and D. C. Martin, 241-s to 250-s.
Transition Temperature—Applicability of Charpy V Tests; Discussion—A. Audige, 131-s; Authors' Reply, 156-s.
Transition Temperature Behavior of Pressure Vessel Steels—L. J. McGeady, 1-s to 11-s.
Transition Temperature by Direct Explosion Tests in Ship Plate—G. S. Mikhalapov and W. A. Snelling, 97-s to 104-s.
Transition Temperature—Comparison of Slow Notch-Bend Test and V-Notch Charpy Impact Test—I.I.W. Report—338-s to 346-s.
Transition Temperature—Crack-Starter Tests of Ship Fracture and Project Steels; Supplementary Note—P. P. Puzak, M. E. Schuster and W. S. Pellini, 196-s.
Transition Temperature—Effect of Electrode Type in the Notch Slow-Bend Test; Discussion—C. E. Hartbower, 166-s to 168-s; Authors' Reply, 168-s.
Transition Temperature—Energy Criteria of Fracture—E. Orowan, 157-s to 160-s.
Transition Temperature—Modified Navy Tear Test for Measuring the Work of Fracture Propagation in Ductile Metals—Hugh E. Romine, 396-s to 408-s.
Transition Temperature of Austenitic Stainless Steels—A. Choquet, V. N. Krivobok and G. Welter, 361-s to 373-s.
Transition Temperature of Nickel Steel Plate, Effect of Welding on—T. N. Armstrong and W. L. Warner, 209-s to 215-s.
Transition Temperature Studies—Brittle Failure of Tankage Steel Plates—F. J. Feely, Jr., M. S. Northup, S. R. Kleppe and M. Gensamer, 596-s to 607-s.
Transition Temperature—The Effect of Microstructure on Notch Toughness—John H. Gross and Robert D. Stout, 117-s to 122-s.
Transition Temperature—The Effect of Microstructure on the Morphology of Fracture—J. C. Danko and R. D. Stout, 113-to 116-s.
University Research Committee—208-s.

Weldability—Comparison of Slow Notch-Bend Test and V-Notch Charpy Impact Test—I.I.W. Report—338-s to 346-s.
Weldability—Heat Treatment of Air Hardening Alloys on Welding—J. J. B. Rutherford and J. F. Ewing, 476-s to 483-s.
Weldability Investigation of Weld-Metal Cracking in High-Strength Steel—R. P. Sopher, A. J. Jacobs and P. J. Rieppel, 544-s to 552-s.
Weldability—Modified Navy Tear Test for Measuring the Work of Fracture Propagation in Ductile Metals—Hugh E. Romine, 396-s to 408-s.
Weldability—Temper Brittleness of 1Cr – 1/2Mo Weld Metal—W. J. Lester and G. R. Prescott, 553-s to 557-s.
Welding Research Problems—265-s to 270-s.
